

Disinfection and sterilisation guide

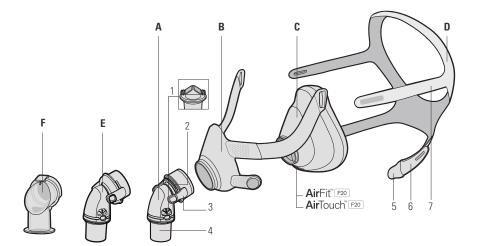

Clinical use only

This guide is intended for multipatient use of the AirFit[™] F20 / AirFit F20 NV / AirTouch[™] F20 ResMed full face mask in a sleep lab, clinic or hospital. If you use the mask as a single user in the home, refer to the User Guide for cleaning instructions. This guide describes ResMed's recommended and validated procedures for cleaning, disinfection and sterilisation of the mask in accordance with ISO17664.

² If a healthcare facility requires an additional disinfection or sterilisation cycle after reassembly, the number of validated cycles must be halved.

³ This component is intended for single patient reuse.

Thermal disinfection procedures - Manual

1. Disassembly	Disassemble the mask according to the instructions in the User Guide.						
2. Cleaning	Alconox						
	AirFit F20 cushion:	Standard elbow (manual):					
	1. Soak the component in 1% Alconox solution at 20-25°C for 1 minute.	1. Rinse the component under running drinking quality water at 15-25°C for 1 minute.					
	2. Whilst immersed in the solution, clean with a soft bristle brush for 1 minute. Pay particular attention to all crevices and cavities.	Soak the component in 1.5-2% Alconox solution at 40-50°C for 5 minutes. Ensure no air bubbles are present and all surfaces come in contact with the solution.					
	3. Rinse by shaking vigorously in 5 liters of drinking quality water. Repeat one more time. Frame:	3. Whilst immersed in the solution, shake vigorously for another 3 minutes. Brush the component for another minute. Pay particular attention to swivel and vents.					
	1. Rinse the component under running drinking quality water at 20-30°C for 1 minute.	4. Rinse the component by vigorously agitating in 5 liters of drinking quality water at 15-25°C for 1 minute.					
	2. Soak the component in 1% Alconox solution at 38.5-40°C for 5 minutes. Ensure no air bubbles are present	5. Rinse the component under running drinking quality water at 15-25°C for 1 minute.					
	and all surfaces come in contact with the solution.	6. Shake the component to remove excess water.					
	3. Whilst immersed in the solution, shake vigorously for another 5 minutes while squeezing the fabric of the	Standard elbow (ultrasonic bath):					
	arms.4. Clean with a soft bristle brush for another minute. Pay particular attention to all crevices and interfaces.	 Rinse and clean the component with a soft bristle brush under running drinking quality water at 20-30°C for 1 minute. Pay particular attention to all crevices, cavities and rotate moveable parts. 					
	5. Rinse the component by agitating in 5 liters of drinking quality water at 19-20°C for 1 minute.6. Rinse the component under drinking quality water at 19-20°C.Headgear:	Fill two-thirds of an ultrasonic cleaner with 1% Alconox solution at 20-30°C and sonicate for 20 minutes. Ensure the component is fully immersed in the solution. Use a basket/tray to prevent contact between the component and the tank.					
	Make a solution of Alconox by diluting with drinking quality water at 1%, ie, 10 g per liter, at 20-30°C, according to the manufacturer's instructions.	 Rinse the component by agitating vigorously in 5 liters of drinking quality water at 20-30°C for 1 minute. Repeat one more time. Non-Vented elbow (manual): 					
	2. Soak the component in the solution for 3 minutes.						
	3. Thoroughly clean the mask component with a soft bristle brush for 2 minute while continuing to soak it in the solution. Pay particular attention to all crevices and cavities.	 Soak the component in 1% Alconox solution at 30-55°C for 5 to 10 minutes. Ensure there are no air bubbles. 					
	4. Squeeze the component to remove excess solution.	2. After the soaking time, while keeping the component in the solution, clean the inside and outside with a					
	5. Rinse the component by repeatedly squeezing it under running drinking quality water at 20-30°C for 30 seconds. Repeat two more times with fresh water.	soft bristle brush for 30 seconds. Pay particular attention to the crevices and cavities. 3. Rinse the component under running water (<60°C) directly contacting all surfaces for 30-60 seconds.					
3. Inspection / Drying	Inspect and if required, repeat washing until visually clean. Allow the mask components to air dry out of direct sunlight.						
4. Disinfection	 1. Using a hot water disinfection system, soak the disinfectable mask components using a temperature-time of Cushion/standard elbow/non-vented elbow/frame: 75°C for 30 minutes; 80°C for 10 minutes; 90°C for Headgear: 93°C for 10 minutes 2. On completion, remove the mask components from the hot water disinfection system. For the frame and head 	for 1 minute; 93°C for 10 minutes					
	3. Allow the mask components to air dry out of direct sunlight.						
5. Inspection	Perform a visual inspection of each mask component. If any visible deterioration of a mask component is apparent (cracking, crazing, tears etc), the mask component should be discarded and replaced. Slight discolouration of the silicone components may occur and is acceptable.						
6. Reassembly	Reassemble the mask according to the instructions in the User Guide.						
7. Packaging and storage	Store in a dry, dust-free environment away from direct sunlight. Storage temperature: -20°C to 60°C.						

¹ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

²Calculated and predicted from known thermal inactivation kinetics of vegetative micro-organisms subjected to thermal disinfection (EN ISO 15883-1) and they are inclusive of the time-temperature combination recommended by the APIC (Associations for Professionals in Infection Control and Epidemiology) and RKI (Robert Koch Institute).

Thermal disinfection procedures - AWD

1. Disassembly	Disassemble the mask according to the instructions in the User Guide.						
2. AWD	Neodisher Med	diZym	Neodisher MediClean forte				
	AirFit F20 cushi	ion/standard elbow/frame/headgear:	AirFit F20 cushion/standard elbow/frame/headgear:		Non-vented elbow:

3. Inspection	2. Perform a visi	required, repeat all steps in Section [2. AWD] step until ual inspection of each mask component. If any visible det e components may occur and is acceptable.	•	component is apparent (cracking, crazing, tears etc)	, the mask component sh	nould be discarded and replaced. Slight discolouration	
4. Reassembly	Reassemble the	mask according to the instructions in the User Guide					
5. Packaging and storage		ust-free environment away from direct sunlight. rature: -20°C to 60°C.					

¹ Validated using an EN ISO 15883-compliant AWD model: Miele & Cie, KG, Guterson, Type G 7836 CD

² Drinking quality water

³ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

Chemical disinfection procedures - CIDEX OPA

Disassembly	Disassemble the mask according to the instructions in the User Guide.			
Cleaning	Alconox			
	AirFit F20 cushion:			
	1. Make a solution of Alconox by diluting with drinking quality water at 1%, ie, 10 g per liter, at (20-25°C, according to manufacturer's instructions.			
	2. Soak the component in the solution. 3. Whilst immersed in the solution, clean with a soft bristle brush for 1 minute. Pay particular attention to all crevices and cavities.			
	4. Rinse by shaking vigorously in 5 liters of drinking quality water. Repeat one more time using fresh water.			
Inspection/Drying	1. Inspect and if required, repeat washing until visually clean. ¹			
	2. Allow the mask components to air dry out of direct sunlight.			
Disinfection	CIDEX OPA			
	AirFit F20 cushion:			
	1. Fully immerse and soak the disinfectable mask components for 12 minutes in a commercially available solution according to the manufacturer's instructions:			
	• ortho-phthalaldehyde 0.55% (eg, CIDEX OPA) at room temperature of 68-77°F (20-25°C).			
	2. Rinse the mask components 3 times in 5 liters of drinking quality water at 68-86°F (20-30°C) for 1 minute ² .			
	3. Allow the mask components to air dry out of direct sunlight.			
Inspection	Perform a visual inspection of each mask component. If any visible deterioration of a mask component is apparent (cracking, crazing, tears etc), the mask component should be discarded and replaced. Slight discolouration of the silicone components may occur and is acceptable.			
Reassembly	Reassemble the mask according to the instructions in the User Guide.			
Packaging and storage	Store in a dry, dust-free environment away from direct sunlight. Storage temperature: -20°C to 60°C.			

¹ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

² Failure to adequately rinse the component may result in toxic levels of residual CIDEX OPA.

Chemical disinfection procedures - Anioxyde 1000

Disassembly	Disassemble the mask according to the instructions in the User Guide.					
Cleaning	Aniosyme DD1					
	Manual – AirFit F20 cushion/frame/headgear: 1. Rinse each individual component with drinking quality tap water for 1 minute. 2. Soak the components in a solution of Aniosyme DD1 diluted at 0.5% with drinking quality water at 15-20°C for 8 minutes. Ensure that the components are fully immersed in the solution and there are no air bubbles. 3. Whilst immersed in the solution, clean the inside and outside of the components with a soft bristle brush for the specified number of minutes. Pay particular attention to the crevices and cavities.					
	 Cushion 1 minute Frame 1 minute Headgear 2 minutes 4. Rinse the components in 5 litres of drinking quality water at 20-30°C for 1 minute. 5. Rinse both internal and external parts of the component under fast running tap water at 20-30°C for another minute. 					
Inspection/Drying	Inspect and if required, repeat washing until visually clean.¹ Allow the components to air dry out of direct sunlight.					
Disinfection	Anioxyde 1000					
	AirFit F20 cushion/frame/headgear: 1. Activate the solution according to the manufacturer's instructions. Use Anioxyde 1000 at room temperature. 2. Soak the components in the activated solution for 5 minutes. Ensure the components are fully immersed in the solution and there are no air bubbles. 3. Rinse the components in 5 litres of drinking quality water at 20-30°C for 1 minute. 4. Rinse both internal and external parts of the components under fast running tap water at 20-30°C for another minute. 5. Allow the components to air dry out of direct sunlight.					
Inspection	Perform a visual inspection of each mask component. If any visible deterioration of a mask component is apparent (cracking, crazing, tears etc), the mask component should be discarded and replaced. Slight discolouration of the silicone components may occur and is acceptable.					
Reassembly	Reassemble the mask according to the instructions in the User Guide.					
Packaging and storage	Store in a dry, dust-free environment away from direct sunlight. Storage temperature: -20°C to 60°C.					

¹ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

Chemical disinfection procedures - Gigasept FF

Disassembly	Disassemble the mask according to the instructions in the User Guide.						
Cleaning	Gigazyme						
	Sonication – Standard elbow: 1. Rinse each individual component with cold running tap water for 1 minute.	Manual – Standard elbow: 1. Rinse each individual component with cold running tap water for 1 minute.					
	 Soak the components in a solution of Gigazyme diluted at 1% with drinking quality water at 23°C. Sonicate the components in ultrasonic bath filled with cleaning solution for 20 minutes. Ensure that the components are fully immersed in the solution and there are no air bubbles. Follow the ultrasonic bath manufacturer's instructions. 	 Soak the components in a solution of Gigazyme diluted at 1% with drinking quality water at 23°C for 5 minutes. Ensure that the components are fully immersed in the solution and there are no air bubbles. While immersed in the solution, agitate the component vigorously for another 3 minutes and brush the outside only for 1 minute. Pay particular attention to the swivel and vents. 					
	4. Rinse the components in 5 litres of drinking quality water at 20-30°C for 1 minute.5. Rinse both internal and external parts of the components under fast running tap water at 20-30°C for another minute.	4. Rinse the component by agitating vigorously in 5 litres of drinking quality water at 20-30°C for 1 minute.5. Rinse both internal and external parts of the component under fast running tap water at 20-30°C for another minute.					
	Manual – AirFit F20 cushion/frame/headgear: 1. Rinse each individual component with cold running tap water for 1 minute. 2. Soak the components in a solution of Gigazyme diluted at 1% with drinking quality water at 23°C for 8 minutes. Ensure that the components are fully immersed in the solution and there are no air bubbles. 3. Whilst immersed in the solution, clean the inside and outside of the components with a soft bristle brush for the specified number of minutes. Pay particular attention to the crevices and cavities.						
	 Cushion 1 minute Frame 1 minute Headgear 2 minutes 						
	4. Rinse the components in 5 litres of drinking quality water at 20-30°C for 1 minute.5. Rinse both internal and external parts of the component under fast running tap water at 20-30°C for anoth	ner minute.					
Inspection/Drying	 Inspect and if required, repeat washing until visually clean.¹ Allow the components to air dry out of direct sunlight. 						
Disinfection	Gigasept FF						
	AirFit F20 Cushion/standard elbow/frame/headgear: 1. Make a solution of Gigasept FF diluted at 5% with drinking quality cold water with a solution temperature of 15-25°C. 2. Soak the components in the solution for 15 minutes. Ensure that the components are fully immersed in the solution and there are no air bubbles. For the frame, squeeze the fabric to release any air bubbles. 3. Rinse the components in 5 litres of drinking quality water at 20-30°C for 1 minute. 4. Rinse both internal and external parts of the components under fast running tap water at 20-30°C for another minute. 5. Allow the components to air dry out of direct sunlight.						
Inspection	Perform a visual inspection of each mask component. If any visible deterioration of a mask component is apparent (cracking, crazing, tears etc), the mask component should be discarded and replaced. Slight discolouration of the silicone components may occur and is acceptable.						
Reassembly	Reassemble the mask according to the instructions in the User Guide.						
Packaging and storage	Store in a dry, dust-free environment away from direct sunlight. Storage temperature: -20°C to 60°C.						

¹ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

Sterilisation procedures - STERRAD

Disassembly	Disassemble the mask according to the instructions in the User Guide.				
Cleaning	Alconox				
	AirFit F20 cushion: 1. Make a solution of Alconox by diluting with drinking quality water at 1%, ie, 10 g per liter, at 20-25°C, according to manufacturer's instructions. 2. Soak the component in the solution for 1 minute. 3. Whilst immersed in the solution, clean with a soft bristle brush for 1 minute. Pay particular attention to all crevices and cavities. 4. Rinse by shaking vigorously in 5 liters of drinking quality water. Repeat one more time.				
Inspection / Drying	 Inspect and if required, repeat washing until visually clean.¹ Allow the mask components to air dry out of direct sunlight. 				
Sterilisation	STERRAD				
	AirFit F20 cushion: 1. Package the mask components prior to sterilisation as described in the manufacturer's instructions for the STERRAD Sterilisation System with STERRAD chemical indicators. Note: The use of pouches is not recommended. 2. Sterilise the component following the manufacturer's instructions for the STERRAD Sterilisation System:				
	 STERRAD 100S Short or Long cycle STERRAD NX Standard or Advanced cycle Notes: 				
	 Drying is achieved as part of the sterilisation process. Check STERRAD indicator strips to ensure machine has run correctly. 				
Inspection	Perform a visual inspection of each mask component. If any visible deterioration of a mask component is apparent (cracking, crazing, tears etc), the mask component should be discarded and replaced. Slight discolouration of the silicone components may occur and is acceptable.				
Reassembly	Reassemble the mask according to the instructions in the User Guide.				
Packaging and storage	Store in a dry, dust-free environment away from direct sunlight. Storage temperature: -20°C to 60°C.				

¹ Failure to clean the mask component as indicated may result in inadequate disinfection and sterilisation.

GENERAL WARNINGS AND CAUTIONS

- ResMed cannot give any assurance that deviations from the procedures listed in this guide (eg, exceeding the number of reprocessing cycles), and their effect on the performance or safety of the product, will be acceptable.
- Mask components should not be subjected to autoclave or ethylene-oxide gas sterilisation.
- When using detergents, disinfectants or sterilisation agents, always follow the manufacturer's instructions. In case of conflict, this guide takes precedence.
- Do not iron the headgear as the material is heat sensitive and will be damaged
